

Large Polish Warehouse Roof Sealed And Protected With ENESEAL HR

The plant engineers at this warehouse facility in Poland were looking for a high performance yet cost effective roof repair and protection system to seal the seams on this very large roof and then protect the roof from the elements.

They decided on ENESEAL HR because of its flexibility, heat refraction properties and UV resistance.

The ENECON Poland Engineering Team

cleaned the entire roof surface which included an alcohol rinse where needed. All joints and seams were first primed with ENECLAD SuperBond in order to insure the best bond possible in these critical areas. Two coats of ENESEAL HR were then applied over the entire roof area.

The 'first class' results speak for themselves.
