

Polish Coal Mining Operation Delighted With FLEXICLAD DuraTough For Their Pumps!

The ENECON Fluid Flow Systems Specialist in Poland provided these pictures of a very successful application at a coal

mine in central Poland. These units are used to pump water at the mine which contains about 10% silica sand

in suspension. Obviously, this is a very aggressive wear condition so the mine's engineers are absolutely delighted

with the performance of the FLEXICLAD DuraTough in this highly abrasive fluid flow environment.
