

Kuwait Oil Tanker Company's Vessel Undergoes Dry-Dock Overhaul at Kuwait Shipyard -- CeramAlloy Used for Major Repairs To Evaporators.

This Kuwait oil tanker company's vessel 'Ras Al-Zour', was dry-docked at Kuwait Shipbuilding & Repairyard Company (SAK) for a general repair and maintenance overhaul.

When it was discovered that the ship's evaporators had been severely damaged by erosion

and corrosion, an urgent call went out to the ENECON Kuwait Engineering Team. The repairs to the evaporators were completed very successfully and saved the ship owners many thousands of dollars - - or Dinars -- over conventional repair and/or replacement procedures.
